#### Explanation

As of January 2020, part of the infrastructure of the refinery is used to continue the fuel supply in Curaçao. To cover the costs for the first half of 2020, the tariff component 'fuel supply guarantee' was introduced, whereby the total costs were spread over a period of 4 years. Since the operation of the refinery was not restarted prior to July 2020, the use of this infrastructure will have to continue.

For the period as from July 2020, it is not possible to spread these costs over a longer period due to financing restrictions. As a result, the costs need to be recuperated directly through the tariffs. Because of this, the fuel tariffs are increasing substantially.

Due to the difference in purchase prices of Mogas and LSD, which are decreasing in August, and to limit an increase in the tariffs of fuels for the electricity supply, the amount of the new tariff component 'guarantee fuel supply (1b)' has been determined per fuel type. At the same time, the old tariff component 'fuel supply guarantee (2)', introduced due to the consequences of the COVID-19 pandemic, will be cancelled. The previously introduced component in connection with the "floating storage" will also be cancelled.

The application of the new component will last until the implementation of an independent fuel infrastructure or the restart of the operation of the refinery.
