Explanation

The decrease in electricity tariffs in December 2026 compared with November 2026, is primarily due to higher projected purchases of wind energy which reduces the need for generation through the diesel power plants, combined with a decrease in the price of the fuel most commonly used in these plants, and a decrease in the correction factor for October 2026. The decrease in the water tariffs results from lower electricity costs for water production, combined with an increase in the correction factor for the month of October 2026.
